Apples and pears need to be pruned differently than peaches and other stone fruits. Before pruning your trees make sure you know where the tree produces flowers and how to prune to encourage flower production. In general, thinning out cuts (those that remove an entire branch back to its point of origin) are less stimulating and encourage more ...

Home Orchards: Why is There No Fruit on My Tree?

Pear trees are a good choice for Tennessee. Plant in a site which has good air circulation and is slightly sloping and elevated. Pear trees bloom early and the flowers are likely to get damaged by spring frost if the trees are in low lying areas. The trees grow best in heavy soils like clay loam with a porous subsoil or a medium or sandy loam.
