Solutions for R. Shankar: Principles of Quantum Mechanics I got this book in my 3rd year of uni when a certain QM course was destroying my life. It seems to strike a good middle ground between being too mathematically simplified (Griffiths) and incomprehensible for beginners (pretty much every other text

It is a general principle of Quantum Mechanics that there is an operator for every physical observable. A physical observable is anything that can be measured. If the wavefunction that

describes a system is an eigenfunction of an operator, then the value of the associated observable is extracted from the eigenfunction by operating on the eigenfunction with the appropriate operator.
